

# 8.1 Integration

## Question Paper

Course	Edexcel IAL Maths: Pure 2
Section	8. Integration
Topic	8.1 Integration
Difficulty	Hard

**Time allowed:** 80

**Score:** /68

**Percentage:** /100

**Question 1**

Use calculus to find the value of

$$\int_4^9 \frac{x^2 + 1}{\sqrt{x}} dx$$

**[5 marks]****Question 2**

Given

$$\int_1^p \left(1 + \frac{1}{x^2}\right) dx = \frac{15}{4}$$

find the value of the constant  $p$ , where  $p > 0$ .

**[5 marks]**

**Question 3**

The diagram below shows part of the graph of  $y = 2x + 3x^2 - 2x^3$ .

Find the area of the shaded region labelled  $R$ .

**[4 marks]**

### Question 4

The diagram below shows part of the graph of  $y = x(x - 1)(x + 2)$ .  
Find the total area of the two shaded regions.

**[8 marks]**

### Question 5

The line with equation  $5y = 14 - 3x$  cuts the curve with equation  $5y = 20 - 2x - x^2$  at the points  $P$  and  $Q$ , as shown.

(a) Find the  $x$ - and  $y$ -coordinates of the points  $P$  and  $Q$ .

**[5 marks]**

### Question 5

(b) Find the exact area of the region labelled  $R$ , giving your answer in the form  $\frac{a}{b}$ , where  $a$  and  $b$  are integers to be found.

**[6 marks]**

### Question 6

The diagram below shows the graphs of  $y = x + 2$  and  $y = 10x - x^2 - 16$ .

Find the exact area of the shaded region.

**[11 marks]**

### Question 7

The diagram below shows a sketch of the curves with equations

$$y = x^3 + 3 \quad \text{and} \quad y = -x^3 + 2x + 3$$

(a) Find the  $x$ -coordinates of the points of intersection of the two graphs.

**[2 marks]**

### Question 7

(b) Use calculus to find the total shaded area enclosed by the two graphs.

**[5 marks]**

**Question 8**

The trapezium rule is to be used to find an estimate for the integral

$$\int_4^8 f(x) \, dx$$

The table below shows values for  $x$  and  $f(x)$ , rounded to three significant figures where appropriate.

$x$	4	4.5	5	5.5	6	6.5	7	7.5	8
$f(x)$	3.16	3.39	3.61	3.81	4	4.18	4.36	4.53	4.69

- (a) Using the values in the table find
- (i) an estimate for the integral using 2 strips,
  - (ii) an estimate for the integral using 4 strips,
  - (iii) an estimate for the integral using 8 strips.

**[4 marks]**

**Question 8**

(b) Justify which of the estimates from part (a) will be the most accurate estimate for the integral.

**[2 marks]**

**Question 9**

The diagram below shows part of the graph with equation  $y = 3 + 2x - x^2$ .

Use the trapezium rule with 5 strips to find an estimate for the shaded area, giving your answer to three significant figures.

**[5 marks]**

**Question 10**

- (a) Use the trapezium rule with  $h = 0.25$  to find an estimate for the area bounded by the curve with equation  $y = 1 + 2^x$ , the  $x$ -axis and lines with equations  $x = 1$  and  $x = 2$ . Give your answer to five significant figures.

**[4 marks]****Question 10**

- (b) The integral

$$\int_1^2 (1 + 2^x) dx$$

can be evaluated as 3.8854 to five significant figures. Using this as its exact value, calculate the percentage error of your estimate from part (a).

**[2 marks]**
